

Includes: (3) 3/4" Chicago screw sets + (1) spare

Step 1 — Position the Plate Align the MOLLE plate with the handle mounting holes.

Step 2 — Install Screws Install one screw at each end and a third screw into a through hole near the midway point. For the most secure configuration, use only one of the three screws on the notched side — install the remaining screws through the mounting holes.

Step 3 — Tighten Tighten each Chicago screw until snug. Do not overtighten.

Tip: If screws loosen with use, apply a small amount of blue (medium-strength) threadlocker and retighten.
Do not use red.
